ADC 284
Revisions to DLMS Supplements to Add SSC Party for BRAC IMSP

1. ORIGINATOR:

    a.   **Service/Agency:** Defense Logistics Agency

    b.   **Originator:** DLA J-3, 703-325-4342 (DSN 427)

2. FUNCTIONAL AREA: Primary: Supply/ Logistics.

3. REFERENCES:

    a. Functional Requirements for DLA's implementation of the BRAC SS&D

    b. DLMSO memorandum, March 6, 2008, subject: PDC 297, Establish New DLMS Supplement (DS) 830D, Version 4030, for Demand Data Exchange (DDE) Forecast in Place of DS 830R,

    c. Version 4030, Special Program Requirements (SPR)/DDE Forecast.

4. REQUESTED CHANGE:

    a. Description of Change: This change is to allow the inclusion of the shop service center (SSC) identifier (also referred to as Shop Store Identifier) on DLMS standard transactions.

    b. Background: As a result of the 2005 BRAC decision, retail supply, storage, and distribution (SS&D) functions and associated infrastructure supporting Service industrial/maintenance sites will transfer to DLA. The first sites to transfer to DLA are 3 Air Logistics Centers – Warner Robins, Tinker, and Hill AFB. At each ALC multiple shop service centers support maintenance and will be pushed material based upon calculated levels. In order to capture demand at the SSC level issues, demand forecasts and requisitions from maintenance must carry the SSC code they are supported by. The SSC should additionally be propagated on the associated MRO to allow inventory to be moved from the most appropriate location.

    c. DLA RECOMMENDS: Adding a new entity identifier code for the SSC to the DLMS transactions as indicated below. DLA requires visibility of the SSC associated with the maintenance line submitting the requisition for BRAC operations supporting the USAF and may be expanded to other Services as appropriate. There is no intent to convert data from DLMS to MILS. The SSC indicator will be considered a fixed field and not modifiable. In later phases of development, the SSC will be perpetuated from the 511R to subsequent follow-on transactions, including release order/confirmation and status transactions. The SSC will also be used in forecasting demand for the maintenance shop.

    d. Scheduled Implementation: Initial DLA Enterprise Business System (EBS), Distribution Standard System (DSS)) and USAF Wholesale and Retail Receiving and Shipping System (D035K) revisions will address critical changes to be completed by June/July 2008 to meet implementation

schedule of IMSP July 15, 2008.   This includes the requisition format (USAF-prepared 511R and DSS-prepared 511R (C0A)), and the USAF direct interface with DSS for the MILSTRIP material release order (A0E with trailer card formats not defined here). Other transactions will be updated in a subsequent release.

e. PROCEDURES.

a. Revise DS 511R, 511M, 869F, 869A, 940R, 945A, 870S, 856S, 830D (as proposed by reference 3.b. PDC 297), 830R (version 4030), and 867D as shown in the tables below.

b. Establish a new DLMS data element for Shop Service Center (SSC), also known as Shop Store Identifier. The code source for USAF SSCs is a table within the D035K system; codes are not published at this time. The D035K system table is the "Maintenance Inventory Center Routing Identification database," better known as "MICRI." Code sources for other Military Service SSCs will be added when identified.

 f.   DAASC Mapping: Update DAASC format for transactions indicated to allow the SSC. No conversion between MILS and DLMS is required.

 g.   Alternatives: EBS will not be able to support the IMSP processes using DLMS standard transactions and will need to consider nonstandard options.

6.   ADVANTAGES AND DISADVANTAGES:

 a.   Advantages: EBS, SBSS (D035K), and DSS, will be able to comply with DLMS standards for the IMSP process.

 b.   Disadvantages: N/A.

7.   NOTE ANY REGULATIONS OR GUIDANCE: Staffing Note: DLMSO requests DLA or Components identify a code source for Service-unique SSC-type codes.
